headlight brackets

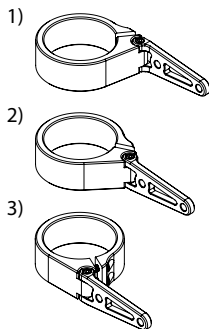

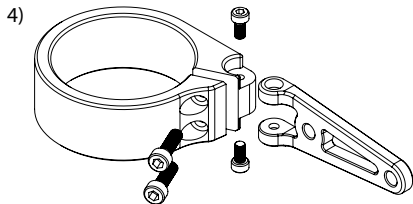

rebel headlight brackets

Installation

The rebel headlight brackets can be adjusted to fit different sizes of headlights. If needed, turn the arm that holds the headlight to decrease the distance between the mounting holes even more. As shown in the picture (1).

It is possible to install turn signals in the extra hole closest to the forks. The mounting holes are 6mm. If necessary enlarge the holes to 8mm with a drill bit. Some headlights and turn signals require 8mm holes. Once installed the cut surface will not be visible.
